

Elf Frank Myrrh: Hello once again from the North Pole News Desk, I'm Elf Frank Myrrh of North Pole Radio News. Santa's sleigh is making news today if only because it appears it will be fully ready for Santa's launch just 14 days from right now. Joining us from Flight Command with new information about Santa's sleigh is the international director of Santa trackers, Elf Crash Murphy. Crash, you have new things to share about Santa's sleigh?

Elf Crash Murphy: Yes, I learned a thing or two in Flight Command I didn't know today when they announced those test flights would be ending early sometime next week. Frank, did you know that the GPS system on the sleigh is able to track data in real time as it is entered into Santa's World Map at SantaTrackers.net?

Elf Frank: No, I didn't know that. What does that really mean?

Elf Crash: You know how Santa issues the bedtime advisories right on his sleigh as he travels the world and it instantly shows up on the North Pole Flight Command website? That same technology updates the heads-up display screen on Santa's sleigh instantly as people add their information to the Santa Map. I watched it work today on a prototype and it's about the coolest thing I've ever seen. They are using that same technology to bridge messages sent from SantaUpdate.com – all of them, Frank – the texts for Santa, the emails, the wish lists, the delivery notifications – all of it Santa will be able to see instantly as it is submitted to the website.

Elf Frank: Crash, is there no end to the geeky stuff you like? When will it ever be perfect for you?

Elf Crash: It'll be perfect, Frank, when they can teleport actual eggnog and real tacos direct to my sleigh. That's when my geeky dreams will be fulfilled.

Elf Frank: I'm sure Research and Development are working on it. Thanks for that report, Crash. From the North Pole news desk, where we think a tour of Santa's final sleigh is in order, I'm Elf Frank Myrrh reporting for SantaUpdate.com on the Kringle Radio Network.
